

Double Mesh

Multi-Sport Mesh Fencing System

The Multi-Sport Mesh Fencing System is a durable, low-maintenance solution designed for a wide range of sporting and club facilities. Manufactured from 80% recycled PVCu, it combines exceptional strength with built-in flexibility for long-lasting performance and enhanced safety. Available in a range of heights and with either half mesh or double mesh infill panels, the system is tailored to suit your facility's specific requirements while effectively keeping balls within the field of play.

Assembly & Installation Specification:

Features:

- **Durable:** Unlike metal and wooden fencing, PVCu will not rust or rot with time; it can withstand extreme desert heat to snowy temperatures without any warping or loss of durability. Comes with a 15-year guarantee.
- **Safety:** Designed with smooth, rounded surfaces and concealed fixings prevent snags and injuries. The PVCu is designed to flex in the event of a collision, significantly reducing the risk of injury to players and spectators.
- **Low Maintenance:** Designed for the outdoors, with no exposed fixtures or porous finishes, the fencing system can be easily cleaned with a damp cloth.
- **Installation Options:** Available in permanent or demountable options, with simple installation and video support.
- **Customised Service:** Our CAD and 3D modelling capabilities mean that we can work closely with clients, architects, and contractors to create the best fencing solution for your projects.
- **Sustainability:** All fencing systems are made up of at least 80% recycled PVCu. This, along with our own in-house recycling systems, allows us to offer the most sustainable PVCu fence option on the market.
